Education

Indian Institute of Information Technology Ranchi

Bachelor of Technology in Computer Science and Engineering

CGPA: 8.67

2022-2026

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, C/C++, SQL, HTML5, CSS3

Frameworks & Libraries: Express.js, Next.js, Socket.io, React.js, Redux Toolkit, Tailwind CSS, Tanstack Query, Mongoose, EJS, C++ STL, Zod, ShadCN UI

Developer Tools: Docker, Node.js, Git/GitHub, Postman, MongoDB Compass, Jupyter Notebook

Cloud Services/Databases: MongoDB, MySQL, Redis, Cloudinary, Render, Vercel, Netlify, Stripe

Core Subjects: Data Structures, Algorithms, Operating Systems, Computer Networks, DBMS

Experience

AirDawg Labs

July, 2026 – Present

AI Systems Evaluation Intern

Remote

- Configured isolated testing environments using **Docker** sandboxes and **Ubuntu** to safely execute and evaluate AI coding agents.
- Engineered command-line evaluation tasks for **Project Terminus**, designing challenges modeled after the **Terminal Bench 2.0** format to assess AI coding agents on real-world system interactions.
- Analyzed model failure modes and edge cases during agent workflows, documenting diagnostic feedback to support improvements in agent reasoning using the **Harbor** framework.

Tata Motors Limited

June, 2026 – July, 2026

Intern

Onsite (Lucknow)

- Contributed to an internal messaging prototype (Socket.io) to provide a self-hosted communication alternative.
- Collaborated to map workflows transitioning internal canteen ordering from manual to **digital workflows**.
- Gained exposure to industrial **IT operations** under the supervision of the Plant Lead (IT Operations).
- Explored enterprise manufacturing IT operations, observing how barcode scanning pipelines synchronize with SAP and IPMS 4.0 to track production and inventory on the shop floor.

Projects

FoodyFlow | TypeScript, MongoDB, Express, Stripe, React, TanStack — ([Code](#) | [Live](#))

Full-stack food ordering application with real-time order management and secure payment integration.

- Implemented secure authentication and authorization using **Auth0** and **JWT**, configuring 5+ protected routes and managing access tokens for role-based user control.
- Developed 10+ core features including real-time order tracking and admin dashboards; improved API performance by 30% using **TanStack Query** (caching & revalidation) and ensured data validation with **Mongoose**, **Express Validator**, **React Hook Form** and **Zod**.
- Integrated **Stripe** payment gateway with webhook-based transaction synchronization; engineered file upload functionality using **Multer** and **Cloudinary** for secure image storage and efficient content management.

TribeTalk | MongoDB, Express, Socket.io, React, Zustand, DaisyUI — ([Code](#) | [Live](#))

Real-time messaging platform using WebSocket (Socket.io) with secure authentication.

- Designed a responsive **Tailwind CSS** interface with **Zustand** for real-time chat interactions.
- Implemented **JWT** authentication and **Socket.io** for instant messaging and live online-user filtering.
- Optimized **MongoDB** and **Cloudinary** backend data pipelines, reducing real-time media load times by 25%.

Achievements

- Qualified the GATE (Graduate Aptitude Test in Engineering) – Computer Science 2025.
- Solved over 700 Data Structures and Algorithms problems on various coding platforms.
- Earned Python Programming Certificate from Kaggle.
